

Additional product information

This pedal has a tone with chimmering high-end and very dynamic overdrive. The color is British Racing Green and tone is also very British, reminds the best vintage class-A amps from England.

User comments from Musictoyz.com Forum:

"I have the Emerald Green Distortion Machine already & it does the Vox thing REALLY WELL too! In fact, I call it "A Hard Day's Night" in a box. This thing is simply uncanny. I've found it to work with any amplifier (or guitar) as a distortion enhancer or as a plain booster. It does wonders for slide and for straight lead playing. Outrageous is the word I use. And the orange LED and bronze lettering is way happening."

"I recently got an EGDM. I think you are really going to like it with your non-Top Boost AC30! Big reason being the quality of the drive on the EGDM is very similar to the turned-up drive characteristic of the AC30, so you are getting that louder amp sound at quieter levels. It's got tons of output level too, big help for boosting. I like it a lot with my AC30."
